Faisst – Your specialist for high-quality aluminum cases. Made in Germany

Enjoy mobility - success with tailor-made cases

„Faisst products are the first choice!“ That's what our customers say, and by that they also mean the comprehensive product range that we are constantly expanding. For over 60 years, we have been consistently expanding our collection and continuously improving existing products.

It is important to us to take on board the wishes of our customers and implement them with good, field-tested products. We accompany the high degree of individualization with comprehensive advice and a detailed elaboration for each customer and their requirements.

Our in-house production works very flexibly and with short delivery times thanks to state-of-the-art production facilities. The global sourcing of all components guarantees market-driven prices for first-class branded products from Faisst.

The recognition effect across all product ranges is an important feature of our brand. The name Faisst stands for modern cases, bags, and etuis in professional quality – our customers can rely on this.

Individual product development

To produce our durable case series, we use only high-quality materials in our company.

From design to finished product

In case production, the entire manufacturing is customised from a single source.

MADE IN GERMANY

Case production made to measure. For over 60 years.

The added value in your case

We adapt every foam insert to your products

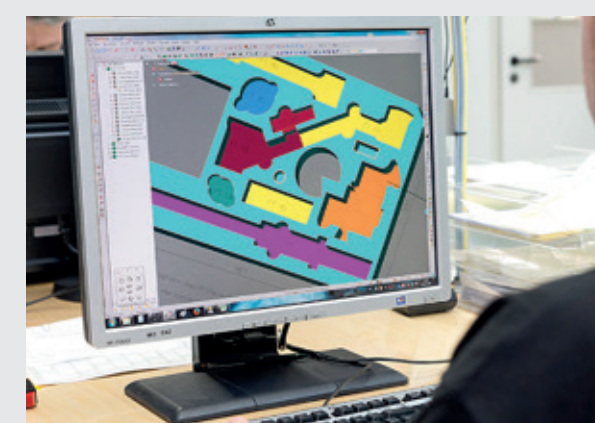

Our solutions are as individual as your products

Your brand is unique. That's why we manufacture our selected and proven range of sample, transportation, and presentation cases with customer-specific foam or thermoformed inserts, tailor-made for your product assortment and equipment.

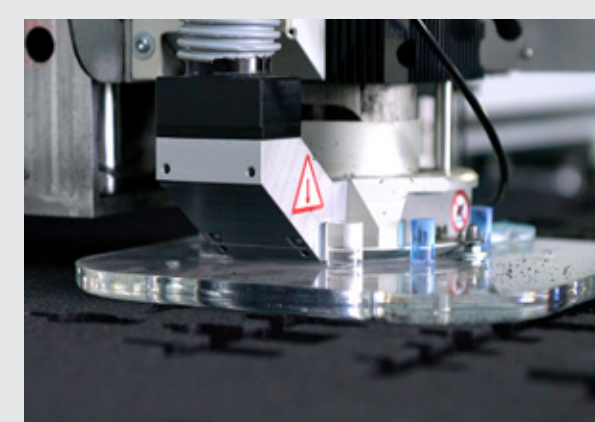

Foam inserts are ideal for protecting sensitive products and transporting them safely. The insole is individually adapted to the products and thus ensures a perfect hold. In addition to protection, transportation cases with foam inserts also enable optimal product presentation. You can choose between varied materials. As a manufacturer of foam inserts, Faisst GmbH specializes primarily in hard foam inserts.

Computer-aided design of case inserts

Precise machining with the waterjet or CNC milling machine

Quality inspection of the individual foam inserts before delivery

Foam insert in your color

A wide range of color variants are possible to match your corporate design

Individual printing possible

The foam inserts can be integrated into the lid and bottom tray of the case and printed

Precise cutouts with finger holes

Precisely fitting recesses allow the tools to fit of the tools. Everything stays in its place

Removable inserts

Compactly housed yet easy to remove. Also available with handles on request

Rigid foam inserts

For particularly space-saving and secure integration of many products

Electronic fixtures and much more

Presentations of electrical components are also possible using Alu-Dibond or ABS plastic plates

Alu Light

Successful solution: A case exactly according to customer requirements

Customer Project PONGS

Elegance is a way of life, suitable for the cases of the Alu Light series. Angular aluminum profiles and harmoniously fitted corners made of impact-resistant metal create an elegant appearance with an incredible service life. The customer PONGS opted for a trolley variant in black, with a logo print on the outside and an individually divided interior with precisely adapted compartments on the inside to accommodate the substantial number of sample folders and accessories to be filled. A successful example of an individual case solution.

“Our case solution combines elegance with stability, compactness, and a structured layout for generous storage space. The Alu Light series was specifically chosen as the basis for the customer-specific modern design, as the corner profiles feature additional riveting. This creates additional stability when goods are tightly filled. Even the inside corners were utilized down to the last millimeter.”

SALVATORE CAMPISI | SALES
Phone +49(0) 7231 42 80 89-41

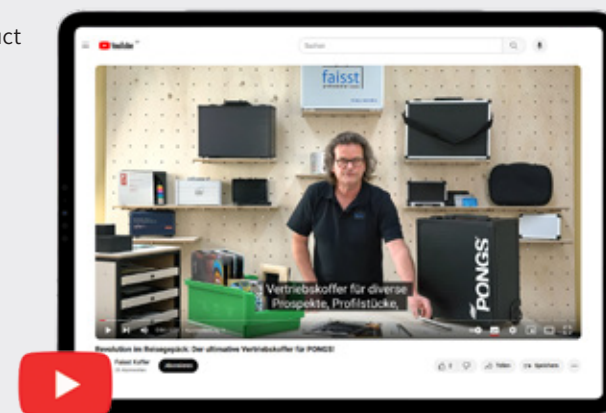

Compact case makes it big:

It's hard to believe how many presentation documents fit into this case. The interior has been calculated so precisely that all components can be accommodated.

TABLO Design powers modern product design at Faisst

Development of an gripping ergonomic concept

In good hands from design to series production

Original Faisst cases are recognized by their unmistakable design. The elegant lines and wave design typical of Faisst indicate the carefully crafted appearance of our cases. Each case series has its own unique look. The individual components of the case have been individually developed and produced. The family of components has been expanded to include a case handle. Refined in multiple development steps and test applications, the grip and comfort of the handle have been maximized. The design concept and technical development is conducted by the in-house design agency TABLO Design. In the design process, color, shape and ergonomics were revised and optimized. Sturdy and equipped with a non-slip grip surface, these handles are available in ten distinct color combinations. Always in harmony with the design concept of the individual cases. Especially the spring-loaded handle joint that allows the handle to fold down elegantly onto the case after carrying conveys a noteworthy value. The customer immediately perceives the unique feel of the high-quality grip surface and the carrying comfort of the case.

For more information on product design development, please contact: Tablo Design Agentur für Gestaltung Carl-Benz-Str. 14-16, D-75217 Birkenfeld / Germany Phone: +49 (0)7231 4888-846, Email: service@tablo.de

Alu Robust in action through Switzerland

Amazon Prime Series with Faisst case

Faisst presents: Destination Escape

4 participants – 8 Swiss destinations – 1 Faisst suitcase:

In Destination Escape, 4 participants embark on an adventure through 8 Swiss destinations. On their epic journey, they face a variety of challenges, solve tricky puzzles and embark on daring activities to win a great treasure in the end. Our Alu Robust case plays a central role in the stream. With its high resistance and clear design language, it is perfect for an adventurous seriesformat such as Destination Escape. An integrated electronic opener with a chip gave the participants access to the tasks they had to complete in the course of the series.

Experience our case now in the series on Amazon Prime and on YouTube.

Further information on the Robust aluminium case can be found at: <https://faisst-koffer.de/en/case-subpages/faisst-at-destination-escape.html>

In the first episode, the four participants faced seven aluminium robust suitcases, each with a hidden task inside.

At various locations, further information was taken from the suitcases with new challenges during their adventure through Switzerland.

The cases are equipped with an electronic access system, which is opened with a chip. The activated locking system is visible from a distance.

Dynamic video tour through our company

Get to know our production

Experience Faisst's production facilities with a drone flight

Let yourself be carried away into the world of the production of high-quality aluminum cases and much more in this OneShot video, from production in the various departments to work preparation and the presentation of our case series in our own showroom. As an experienced case manufacturer in Germany, we implement your specifications and requirements down to the smallest detail in our production facility in Birkenfeld near Pforzheim and are available to advise you throughout the entire process.

Developed for extreme operations

Special case for military and task forces

Designed for off-road applications

For military applications, Faisst offers various high-quality special case series such as aluminium cases, transport cases, hard-shell cases and special injection-moulded plastic cases made of high-quality polypropylene. Depending on the area of application, these offer maximum protection for your technical equipment. The cases are expedition-proof, lightweight and robust to handle – making them ideal for transporting sensitive IT technology such as measuring devices, photographic equipment, precision devices or drones. You can rely on these cases. They are always ready for professional use. The choice of size and design depends on the subsequent use. Precisely cut foam inserts secure the case contents and enable quick handling.

Custom-fit foam inserts for fixing technical equipment

For quick, intuitive use of your high-tech equipment such as drones or long guns, Faisst GmbH, as a leading provider of cases, offers the right case interior with precisely cut foam inserts. These are available as hard or soft foam, wave foam or grid foam in four standard colours. Adjustable compartment systems also secure small parts and offer the option of sorting using hard plastic dividers.

For safe storage of your firearms with accessories

For safe, lockable transport and storage of your firearms, Faisst offers individual case solutions in special and oversized formats that are precisely tailored to your requirements – as OEM hard plastic cases, aluminium cases or even Military Standard certified, break-proof transport cases made of high-quality polypropylene hard plastic from the SINORA brand. Lockable quick-folding latches and sturdy fittings prevent the theft or misuse of weapons.

Mobile office for use in the field: Functional case for laptop and printer

The functional cases in the 'Xpert Case' series are exactly the right case solutions if you want to capture documents and print them out at the same time during military operations. With a precisely fitting functional installation made of lightweight aluminium elements, there is space for a laptop and a mobile compact printer. The devices can be securely fixed and safely stored, and can be transported in a space-saving and protected manner. An integrated power plug enables charging without removing the device.

Our trade fair presence **23.02. – 25.02.2026** at the ENFORCE TAC trade fair in Nürnberg

Faisst at the Enforce Tac 2026

News on safe and innovative Case solutions in the military sector

In 2026, Faisst will once again be represented at Enforce Tac in Nuremberg, the leading trade fair for internal and external security. With our high-quality aluminium cases, we offer solutions for technology, security, mechanical engineering, defence and tactical equipment, among others. Our customised inserts reliably protect sensitive equipment such as drones, weapons or security equipment and ensure a professional presentation. In addition to our aluminium cases, we have teamed up with SINORA Cases to present robust polypropylene cases that are certified to MIL-STD-810H. In combination with customised inserts from Faisst, the result is a perfect solution for the safe transport and optimum storage of sensitive products.

You will find us in Hall 6, Stand 6-359, where we will be presenting innovative case solutions together with SINORA Cases. Visit us at Enforce Tac and let us advise you - we look forward to seeing you!

We will be happy to advise you! Phone: +49 (0)7231 428089-0

Technical development from a single source up to series production

OEM hard-shell cases in special form factors fully according to customer wishes

The new lightweight cases based on individual tooling

The thermoformed 2-layer ABS plastic cases are developed to scale entirely according to customer requirements in individual shapes and colors. As configuration cases, they serve as a sales aid for companies and contain original samples of the goods to be presented. Various successful examples of special shapes have already been realized to date, for which our in-house production can accommodate an almost unlimited variety of shapes on request.

Thanks to the thermoforming technology, the design of the case height is quite variable and can be implemented up to a total height (lid and lower part) of 200 mm. The hard cases are made of impact-resistant ABS. Foam or thermoformed inserts can be easily integrated into the case.

Faisst gives you everything from a single source – from consulting to design, technical development to series production and roll-out. Our team of experienced specialists in every field perfectly complements a network of qualified suppliers – in Europe and worldwide. The ideal path to your new product is via Faisst – so you can benefit from our decades of experience.

Satisfied customers confirm the successful collaboration with Faisst: "Thanks to the professional cooperation with Faisst, we were able to produce this special case in an innovative design and as a tribute to the G-Class. The case is a visual highlight in every sales room and its use during consultations turns these into a special experience for our customers."

The practical shoulder strap system for your suitcase

How to transport your suitcase over longer distances in the city

In larger cities, there is often the problem of having to cover longer distances from the car park to the customer on foot, by bike or with an e-scooter. Our solution to this is the innovative suitcase carrying strap system, specially developed for these situations, which is as easy to carry as a backpack. With the case on your back, you have your hands free and also make much better progress on rough terrain.

The carrying strap system is simply placed around the case and fastened using the straps. Soft shoulder straps and a padded textile back surface protect the back from pressure and offer improved carrying comfort.

Available in the Faisst Shop:
<https://faisst-koffer.de/en/shop-en.html>

Tear-resistant and very sturdy:
The carrying strap system is simply placed around the case and can be adjusted in length with strap buckles. The soft back panel made of breathable textile and the padded straps reliably protect the back from pressure points.

Put it on and off you go:
Your suitcase can be carried comfortably over long distances on your back and removed again in one easy step.

X-PRESS-Boxes OCEAN – Eco-friendly shipping boxes

A contribution to sustainability

Do you already know about our alternative plastic shipping boxes?

The pollution of the world's oceans is unmistakable. We take action against that by using recovered and recycled ocean plastic to produce our proven X-Press boxes. In doing so, we rely on the professional work of tide ocean SA in collecting and processing the materials.

The practical small parts packaging made of recycled polypropylene is almost indestructible and protects your goods during shipping. A solid inner frame guarantees a safe packing space. The practical closure is easy to open and close again and again. The shipping boxes are available in two sizes, one color, and in practical packaging units.

For larger quantities, custom colors are possible, as well as an individual stamp insert with your name in the box. Single or multi-color printing on the outside is possible at any time; for that, please send us your print data.

XPRESS BOXES

New solution for Vario Case Pro trolleys with multiple wheels

The choice is yours for your mobility

Trolleys with a choice of 2 or 4 wheels

The possibility of producing a case as a trolley with wheels makes the case flexible and easier to manage – especially for heavy contents. The determining factor here is the subsequent use.

For this reason, in addition to the previous production with two corner castors, a new concept with four sub-structure swivel castors has now also been developed.

The decision to equip a trolley with 2 or 4 wheels depends on what it will be used for later. With two corner castors (available as rubber castors in a plastic housing), the trolley is pulled in one direction and is suitable primarily for uneven surfaces such as paving stones or natural terrain. On the other hand, for smooth surfaces inside buildings, on streets, or in showrooms, four castors are ideal for moving the case with ease in an upright position and in a 360-degree radius.

As an option, existing cases can also be retrofitted with a click-on trolley – the choice is yours.

NEW

New: 360-degree rotation – case with 4 wheels, ideal for even surfaces

Stable and proven – case with 2 wheels, for uneven terrain

Alu Briefcase winner at the iF Design Award

Excellent in design, quality and service

The handy and lightweight design aluminium etui

Alu Briefcase is a series of presentation cases for the transport and presentation of small and valuable products. Until now, there have not been many lightweight solutions for presenting these products in a modern and high-quality way. The award was given for the unique design.

The Faisst-specific features make Alu Briefcase into a design statement that perfectly showcases the user's product during sales presentations. The specially shaped corners allow the cases to be stacked in an elegant way. Available in an assortment of colors and sizes.

Alu Briefcase available in the shop

ALU BRIEF CASE

Protective case in cooperation with SINORA

New protective cases in the Faisst range

Tested and certified – rigorously vetted

A new addition to Faisst's range is the SINORA series of protective cases. SINORA plastic injection molded cases offer maximum protection of sensitive contents and devices. Made of high-quality polypropylene, they are lightweight, sturdy, and waterproof. Tailor-made inserts perfectly protect your technical equipment. Ideal for transporting sensitive equipment and individual needs.

The standard sizes of SINORA cases cover a wide range of applications and can be used in many ways as protective or outdoor cases. The twelve standard prefabricated sizes are designed to meet the needs of a wide range of customers. They range from small, handy cases that are ideal for transporting delicate devices or personal items, to larger cases that offer ample space for tools, equipment, or other larger items.

SINORA cases are available in the shop including lid and bottom foam as well as a grid foam that customers can customize themselves.

„ SINORA cases were designed to withstand extreme demands and protect your most sensitive contents. These protective cases are tested and certified according to IP 67 (dust and moisture), and according to military standards, such as MIL-STD 810 (breakage resistance, thermal shock, drop and shake tests). SINORA cases thus guarantee the highest level of transport protection.

Electronic case access

More security with fingerprint locks

Electronic locks
After the fingerprint contact the locks open almost silently by themselves

Quick opening of the case via a fingerprint sensor
Maximum security is provided by pre-programming with the individual fingerprint code

Additional TSA locks
Manual locks for TSA keys are integrated for customs control

The ideal solution for security transports

In an increasingly networked and mobile world, security and convenience are becoming more and more important when travelling – especially when transporting sensitive or valuable items. This is exactly where modern security cases with innovative fingerprint technology come in.

A key highlight is the advanced fingerprint unlocking system. Instead of searching for a numerical code or carrying a key, all you need to do is tap the sensor integrated under the handle. Within seconds, the system recognises the registered fingerprint and unlocks the case – quickly, intuitively and absolutely user-friendly. This technology not only offers convenience but also increases security, as unlike classic locks, which can be easily picked or keys easily lost, only authorised persons are granted access (up to five biometric fingerprints can be stored).

The cases are also equipped with manual TSA locks for international travel. With the combination of state-of-the-art biometrics and proven TSA security, these cases offer the perfect solution for anyone who values maximum security, convenience and innovation – whether travelling on business, at presentation appointments or when transporting confidential contents.

The fingerprint locks are available for the Faisst case series Vario Case and Vario Case Pro. Contact us for further information.

Michelin & honeymilkpepper rely on Faisst

Innovative presentation case with a strong brand presence

Together with our project partner honeymilkpepper GmbH, we were able to realise a unique presentation case for Michelin. It was customised for a strong presence in the field and at trade fairs. The aim was to develop a transport and presentation concept that intelligently combines design, functionality and safety.

The result is an individually manufactured aluminium light case with a fully printed, water- and scratch-resistant surface. Black aluminium profiles and robust fittings underline the high-quality character and are ideally suited to the requirements of the automotive industry.

Inside, the case impresses with a colour-printed hard foam insert, supplemented by poly panels for precise placement of the new Michelin tyre treads. An integrated tablet module enables interactive product presentations and attracts the customer's attention.

The partnership-based collaboration with the creative team at honeymilkpepper, who developed the overall concept, deserves special mention. From the first design draft to the technical realisation, this project shows how strong brand understanding, good design and well thought-out case technology work together perfectly.

A project that shows: When creative ideas and technical expertise come together, the result is more than just a suitcase. The result is a genuine brand experience.

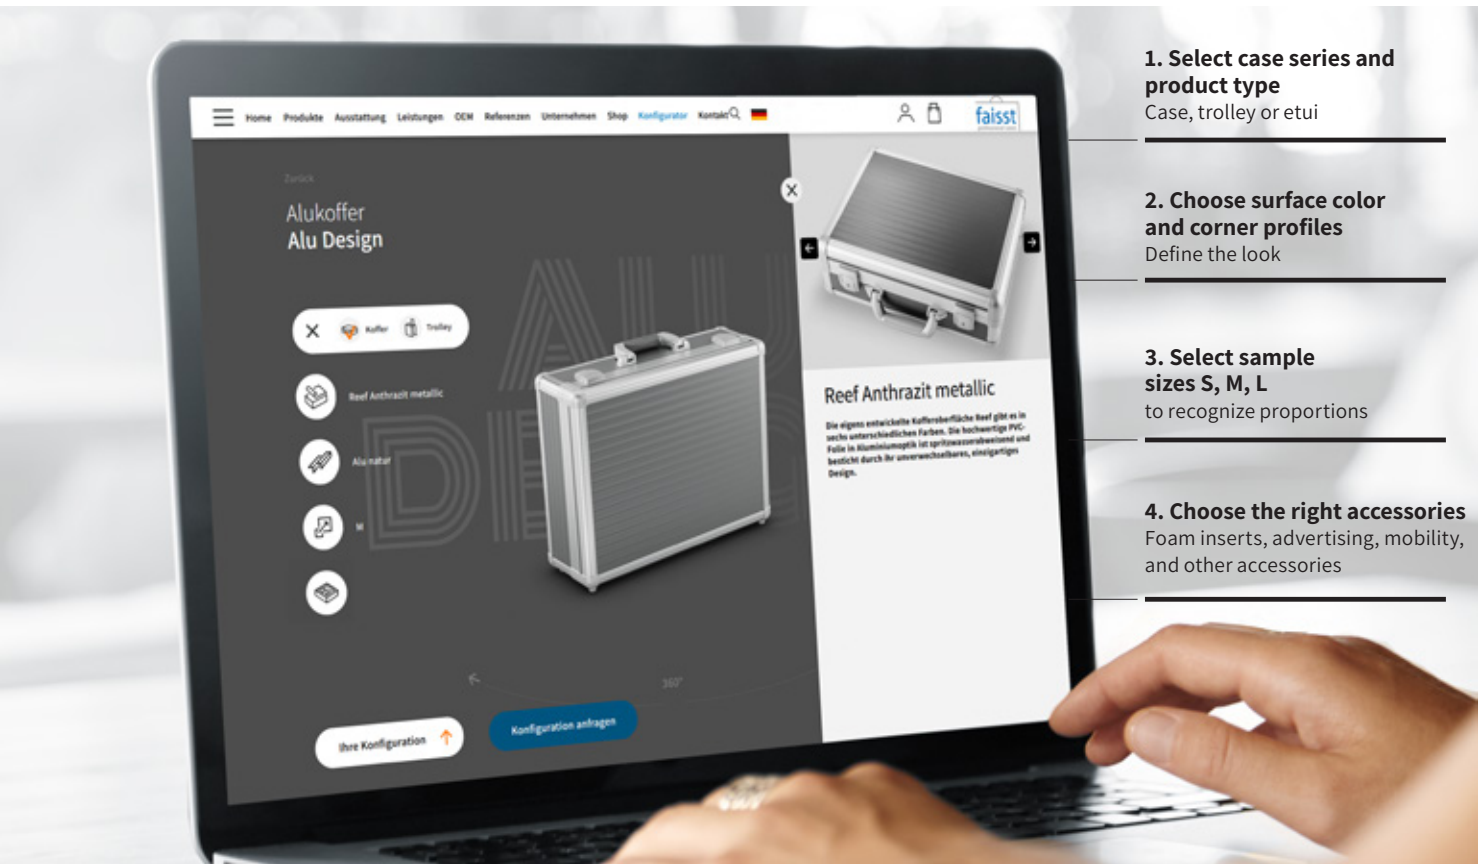

Case surface with logo label
A co-operation label is riveted onto the scratch-resistant and water-repellent surface of the front of the case for various car manufacturers.

Inside of lid and base insert with printed hard plastic insert
The striking full-surface printing in company colours creates the right eye-catcher and supports the presentation of the product.

Configure individually online

<https://faisst-koffer.de/en/configurator.html>

1. Select case series and product type
Case, trolley or etui

2. Choose surface color and corner profiles
Define the look

3. Select sample sizes S, M, L
to recognize proportions

4. Choose the right accessories
Foam inserts, advertising, mobility, and other accessories

Configure a case visually in just a few steps and make an enquiry with the new configurator

Precisely fitting. Made to measure. Simply perfect.

Every company has its own requirements for its presentation case. With the configurator, we offer you the opportunity to make a basic enquiry in just a few easy steps.

You will receive a visual image of your presentation case, trolley or case in your desired configuration. We have placed particular emphasis on brilliant visualisation and clear user guidance.

In just a few steps, you define which surface, corner profiles and accessories you want. You are guided intuitively through the configurator step by step. You can call up your configuration at any time to check it before sending it as your enquiry. Sample sizes (S, M, L) give you an overview of the product proportions.

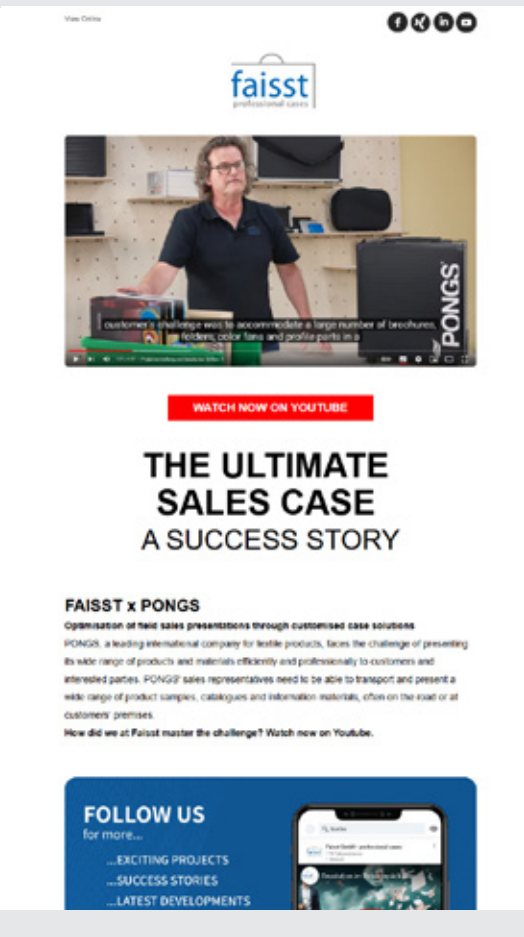

The exact dimensions of your case and customised products are defined individually in a further step with your consultant to suit your products. Just try it out.
